

Commitment To Quality

Ardent began building **quality ergonomic seating** using the **best quality components**, for both durability and comfort. This unique blend of quality in its ergonomic styling is suited to many tasks.

We believe design for comfort is important, but at the same time must be functional in order to give excellent performance. But comfort is not easy to achieve, for everyone is not made in the same shape or form. An **8 ply hardwood seat pan** and **7 ply hardwood back pan** carry a **lifetime warranty**. 1" thick foam on the back and our specially designed, **molded seat cushion is 2 1/2" thick** gives hours of comfort, but does not relinquish support. The **waterfall seat front** ensures **total comfort** and **vascular support**. **Easy to reach levers** enables infinite positioning for back and seat angle adjustments to fit anyone instantly. **Back height adjustment**, which is independent, **permits proper lumbar placement**. A **pneumatic lift**, which also acts as a shock absorber, also employs an easy to reach lever, allowing the user to select the appropriate seat height at their fingertips.

Height and slotted width adjustable arms are soft on the elbows and forearms, but have **steel reinforced inserts** to ensure a secure connection to the arms frame, are set back enough to allow the user to move close to their work without bumping the desk. For excellent stability, we use a **2" support column**, which is the largest of any chair in its class. Our proportionally appointed **24" five prong base** is made from durable **reinforced** nylon for toughness, has a smooth finish and all the edges have been rounded as to not damage users footwear.

We believe movement while being seated is essential, it's the only thing touching the floor – that's why we pursued one of the finest quality **55 mm hooded casters** in the world, available for **carpeted** or **tiled** surfaces, for easy mobility and years of trouble free use. If the task involved requires a preference to no movement, locking casters or **glides are also available**.
