

Ardent's commitment to the environment began before government's issued regulations protecting the environment and many years before the introduction of ISO 14000. Ardent reduces, recycles and disposes of all waste using safe and responsible methods. All cardboard and paper goods for disposal are put into recycle containers and once again recycled.

We have designed our products for long life and maximized recyclability, our chairs are over 90 percent recyclable by weight. Half of our freight is shipped blanket wrapped allowing us to fit more into a trailer and avoid the use of cardboard in the packing process. In certain situations we would recover the cartons that were used in a shipment and send them back to the factory.

- Metal components are 100% recyclable and are made from up to 100% recycled material.
- Plastic used in products are 100% recyclable and are made from up to 100% recycled material.
- All molded and die-cut (die-cut has no leftovers) foam is CFC-free and is applied using adhesives free of volatile organic compounds.
- Hardwood veneers originate from sustainable forests
- Our cardboard packaging is made from 80% recycled material

Our mission is to manufacture affordable, well-designed office seating in the most environmentally responsible way.
